

Wambo™ User Manual

Description:

Wambo™ is a soundboard app capable of playing and recording new sound effects. On startup the app will open with the logo, a create soundboard button, dropdown menu for selecting created soundboards, and a launch button. A new user will have to create a new soundboard that will show up in the choose soundboard dropdown. Existing users will select previously created soundboards from the drop down. There is a limit of 9 soundboards in the dropdown and users can delete them inside of the specific soundboard. In the selected soundboard the user will be able to assign a name and a sound effect to the button. The app is oriented vertically, with new buttons placed below the original 10 in a scrollview. The app comes with 10 stock sound effects.

Button Functions:

Splash Screen:

Create new Soundboard - Creates a new blank page for a specific genre of sound effects.

Select Soundboard - Drop down menu featuring all preexisting soundboards to choose from.

Launch - If a specific soundboard is chosen from the 'Select Soundboard' menu, the user will be taken to that page.

In app:

Sound Tile - Each sound tile is clickable and every click will play the corresponding sound.

Create New - A popup will show on the screen asking for a button name

Choose File - This will show up on Create New. Allows a user to choose a sound file to upload

Record File - This will show up on the Create New. Allows a user to record a new sound file in the app.

Help Button - List off button controls in a help option. (Three dots)

Sound Tile Functionality:

Long press on each sound tile will prompt the user to edit the button name, sound effect, or delete the button. Upon a regular press, the button will play the desired sound effect.
